

How to start a game

1. Go to <https://itch.io/app>
2. Download and install their launcher app.
3. To use this app, you WILL need an itch.io account.
- Don't worry, they won't sell your data or hack your computer or anything else.
4. Run the launcher and look for the game you wish to play.
5. Install the game
6. You can find your installed games when you click the second link (in the menu left of your screen), the one right between "itch.io" and "Collections".

Rules

- 1.) Spreading hacks/exploits is prohibited.
 - You're almost 100% guaranteed to get a ban. It messes with the server and other players' game experience if you hack anyways, which can cause malfunctions in the server and/or the game. If you find something, rather report it on our discord.
- 2.) No negativism, hate-speech, etc. We want a positive community, don't be messing with/harassing a person due to their beliefs, nor ways of living or anything private they choose to tell you.
- 3.) No "mobbing" or "spam-killing".
 - Every player has a right to enjoy the game. Forcing them out of the game by killing **only** them all the time is badsporting at best and a reason for moderators to target you at worst.
- 4.) Any ban-hopping/how-to talk is prohibited. Anything that tells the administration team you plan to ban-hop will result in another ban. If you ban-hop continuously, it'll just get you into more trouble. Just behave next time and you'll be fine anyways.
- 5.) A Moderator's Command. Obviously, if a moderator says to do something, do it. Except for giving out personal information, you ain't required to do that.
